

Wireless Sensor Network (WSN) is an infrastructure-less wireless network that is deployed in a large number of wireless sensors in an ad-hoc manner that is used to monitor the system, physical or environmental conditions. Sensor nodes are used in WSN with the onboard processor that manages and monitors the environment in a particular area. They are connected to the Base Station which acts as a processing unit in the WSN System. The base Station in a WSN System is connected through the Internet to share data.

Munusamy K.

**Dr. K. Munusamy**  
Professor,  
Head of the Department,  
Department of Computer Science,  
Excel College for Commerce and Science,  
Komarapalayam, Namakkal,  
TamilNadu, India-637303.

FOR AUTHOR USE

# Least Power Adaptive Hierarchy Cluster for Balancing Energy on WSN
