B.Sc- Computer Science (Artificial Intelligences and Data Science) Syllabus under CBCS Pattern with effect from 2023-2024 onwards

PERIYAR UNIVERSITY

PERIYAR PALKALAI NAGAR SALEM-636011

DEGREE OF BACHELOR OF SCIENCE

Syllabus for

B.Sc., COMPUTER SCIENCE (ARTIFICIAL INTELLIGENCES AND DATA SCIENCE)

(SEMESTER PATTERN- CBCS)

(For Candidates admitted in the colleges affiliated to

Periyar university from 2023-2024 onwards)

1. Introduction

B.Sc. Computer Science (Artificial Intelligence and Data Science)

Education is the key to development of any society. Role of higher education is crucial for securing right kind of employment and also to pursue further studies in best available world class institutes elsewhere within and outside India. Quality education in general and higher education in particular deserves high priority to enable the young and future generation of students to acquire skill, training and knowledge in order to enhance their thinking, creativity, comprehension and application abilities and prepare them to compete, succeed and excel globally. Learning Outcomes-based Curriculum Framework (LOCF) which makes it student-centric, interactive and outcome-oriented with well-defined aims, objectives and goals to achieve. LOCF also aims at ensuring uniform education standard and content delivery across the state which will help the students to ensure similar quality of education irrespective of the institute and location.

Computer Science is the study of quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. throughout the world in last couple of decades and it has carved out a space for itself like any other disciplines of basic science and engineering. Computer science is a discipline that spans theory and practice and it requires thinking both in abstract terms and in concrete terms. Nowadays, practically everyone is a computer user, and many people are even computer programmers. Computer Science can be seen on a higher level, as a science of problem solving and problem solving requires precision, creativity, and careful reasoning. The ever-evolving discipline of computer science also has strong connections to other disciplines. Many problems in science, engineering, health care, business, and other areas can be solved effectively with computers, but finding a solution requires both computer science expertise and knowledge of the particular application domain. Computer science has a wide range of specialties. These include Computer Architecture, Software Systems, Graphics, Artificial Intelligence, Computational Science, and Software Engineering. Drawing from a common core of computer science knowledge, each specialty area focuses on specific challenges. Computer

Artificial intelligence (AI) is the ability of machines to replicate or enhance human intellect, such as reasoning and learning from experience. Artificial intelligence has been used in computer programs for years, but it is now applied to many other products and services. For example, some digital cameras can determine what objects are present in an image using artificial intelligence software. In addition, experts predict many more innovative uses for artificial intelligence in the future, including smart electric grids.

AI uses techniques from probability theory, economics, and algorithm design to solve practical problems. In addition, the AI field draws upon computer science, mathematics, psychology, and linguistics. Computer science provides tools for designing and building algorithms, while mathematics offers tools for modeling and solving the resulting optimization problems.

2. Programme Outcomes (PO) of B.Sc. degree programme in Computer Science Artificial Intelligence and Data Science

- Scientific aptitude will be developed in Students
- Students will acquire basic Practical skills & Technical knowledge along with domain knowledge of different subjects in the Computer Science & humanities stream.
- Students will become employable; Students will be eligible for career opportunities in education field, Industry, or will be able to opt for entrepreneurship.
- Students will possess basic subject knowledge required for higher studies, professional and applied courses.
- Students will be aware of and able to develop solution oriented approach towards various Social and Environmental issues.
- Ability to acquire in-depth knowledge of several branches of Computer Science and aligned areas. This Programme helps learners in building a solid foundation for higher studies in Computer Science and applications.
- The skills and knowledge gained leads to proficiency in analytical reasoning, which can be utilized in modelling and solving real life problems.
- Utilize computer programming skills to solve theoretical and applied problems by critical understanding, analysis and synthesis.
- > To recognize patterns and to identify essential and relevant aspects of problems.
- Ability to share ideas and insights while seeking and benefitting from knowledge and insight of others.

The above expectations generally can be pooled into 6 broad categories and can be modified according to institutional requirements:

- PO1: Knowledge
- PO2: Problem Analysis
- PO3: Design / Development of Solutions
- PO4: Conduct investigations of complex problems
- PO5: Exhibit good **domain knowledge** and completes the assigned tasks Effectively and efficiently in par with the expected quality standards.

PO6: Apply **analytical and critical thinking**toidentify, formulate, analyze and solve Complex problems in order to reach authenticated conclusions

3. Programme Specific Outcomes of B.Sc. Degree Programme in Computer Science Artificial

Intelligence and Data Science

- PSO1: Graduates should be able to evolve AI based efficient domain specific processes for effective decision making in several domains such as business and governance domains for Artificial Intelligence and Data Science
- PSO2: Familiarize the students with suitable software tools of computer science and industrial applications to handle issues and solve . Problems in mathematics or statistics and realtime application related sciences.
- PSO3: Demonstrate the ability to create innovative solutions from idea to product, applying Scientific methods and tools
- PSO4: Provide innovative ideas to instigate new business ventures in the hospitality industry
- PSO5: Acquire good knowledge and understanding to solve specific theoretical and applied problems in advanced areas of Computer Science and Industrial statistics.
- PSO6: Apply the technical and critical thinking skills in the discipline of artificial Intelligence and Data Science to find solutions for complex problems.
- PSO7: Equip with Computer science technical ability, problem solving skills, creative talent and power of communication necessary for Various forms of employment.

PSO8: To collect requirements, analyze, design, implement and test software Systems.

Mapping of Course Learning Outcomes (CLOs) with Programme Outcomes (POs) and Programme Specific Outcomes (PSOs) can be carried out accordingly, assigning the appropriate level in the grids:(put tick mark in each row)

| PO/PSO | PSO1 | PSO2 | PSO3 | PSO4 | PSO5 | PSO6 |
|--------|--------------|------|------|------|------|------|
| PO1 | \checkmark | | | | | |
| PO2 | | ~ | | | | |
| PO3 | | | ~ | | | |
| PO4 | | | | ~ | | |
| PO5 | | | | | ✓ | |
| PO6 | | | | | | ✓ |

4. Highlights of the Revamped Curriculum

- Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry / real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- The General Studies and Computer Science based problem solving skills are included as mandatory components in the 'Training for Competitive Examinations' course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- The Internship during the second year vacation will help the students gain valuable work experience that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest – Statistics with R Programming, Data Science, Machine learing. Internet of Things and Artificial Intelligence etc..

5. Value additions in the Revamped Curriculum:

| Semester | Newly introduced Components | Outcome / Benefits |
|-------------|--|--|
| | Foundation Course | Instil confidence among students |
| | To ease the transition of learning | • Create interest for the subject |
| | from higher secondary to higher | |
| Ι | education, providing an overview of | |
| | the pedagogy of learning abstract | |
| | Mathematics and simulating | |
| | mathematical concepts to real world. | |
| | Skill Enhancement papers | Industry ready graduates |
| | (Discipline centric / Generic / | Skilled human resource |
| | Entrepreneurial) | • Students are equipped with essential skills to |
| | | make them employable |
| | | • Training on Computing / Computational skills |
| | | enable the students gain knowledge and exposure |
| | | on latest computational aspects |
| | | • Data analytical skills will enable students gain |
| I, II, III, | | internships, apprenticeships, field work involving |
| IV | | data collection, compilation, analysis etc. |
| | | • Entrepreneurial skill training will provide an |
| | | opportunity for independent livelihood |
| | | • Generates self – employment |
| | | Create small scale entrepreneurs |
| | | Training to girls leads to women empowerment |
| | | • Discipline centric skill will improve the Technical |
| | | knowhow of solving real life problems using ICT |
| | Floative peners | tools |
| | Elective papers- An open choice of topics categorized | Strengthening the domain knowledge Introducing the stakeholders to the State of Art |
| | under Generic and Discipline Centric | • Introducing the stakeholders to the State-of Art |
| | under Generie and Discipline Centre | techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature |
| | | |
| III, IV, V | | • Students are exposed to Latest topics on Computer Science / IT, that require strong |
| & VI | | mathematical background |
| | | Emerging topics in higher education / industry / |
| | | communication network / health sector etc. are |
| | | introduced with hands-on-training, facilitates |
| | | designing of mathematical models in the |
| | | respective sectors |
| | | |

| IV | Industrial Statistics | Exposure to industry moulds students into solution providers Generates Industry ready graduates Employment opportunities enhanced | | | | |
|---|--|---|--|--|--|--|
| IV | Internship / Industrial Training | • Practical training at the Industry/ Banking Sector / Private/ Public sector organizations / Educational institutions, enable the students gain professional experience and also become responsible citizens. | | | | |
| V | Project with Viva – voce | Self-learning is enhanced Application of the concept to real situation is conceived resulting in tangible outcome | | | | |
| VI | Introduction of Professional Competency component | Curriculum design accommodates all category of learners; 'Mathematics for Advanced Explain' component will comprise of advanced topics in Mathematics and allied fields, for those in the peer group / aspiring researchers; 'Training for Competitive Examinations' –caters to the needs of the aspirants towards most sought - after services of the nation viz, UPSC, CDS, NDA, Banking Services, CAT, TNPSC group services, etc. | | | | |
| Extra Credits: For Advanced Learners / Honors degree | | • To cater to the needs of peer learners / research aspirants | | | | |
| Skills acq | uired from the Courses | Knowledge, Problem Solving, Analytical ability,ProfessionalCompetency,ProfessionalCommunication and Transferrable Skill | | | | |

| II | DESIGN & SOFTWARE PROCESS: | |
| | • Interactive Design: | |
| | • Basics – process – scenarios | |
| | • Navigation: screen design Iteration and prototyping. | 10 |
| | • HCI in software process: | 12 |
| | • Software life cycle – usability engineering – Prototyping in | |
| | practice – design rationale. Design rules: principles, standards, | |
| | guidelines, rules. Evaluation Techniques – Universal Design | |
| III | MODELS AND THEORIES: | |
| | • HCI Models : Cognitive models:- Socio-Organizational issues | |
| | and stakeholder requirements Communication and collaboration | 12 |
| | models-Hypertext, Multimedia and WWW. | |
| IV | Mobile HCI: | |
| | • Mobile Ecosystem: Platforms, Application frameworks | |
| | • Types of Mobile Applications: Widgets, Applications, Games | |
| | • Mobile Information Architecture, Mobile 2.0, | 12 |
| | • Mobile Design: Elements of Mobile Design, Tools Case | |
| | Studies | |
| V | WEB INTERFACE DESIGN: Designing Web Interfaces – Drag & | |
| | Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual | 12 |

| | Pages, Process Flow - Case Studies | | | | | | |
