### **Seminar on Python Automation Testing**

#### **Summary Report**

**DATE** : 27/10/2022  
**VENUE** : B1 Block Lab  
**NO. OF PARTICIPANTS** : 48

This is to inform that, Excel Engineering College, Department of MCA conducting **Seminar on Python Automation Testing** on 27.10.2022. Python is used for server-side web development, software development, mathematics, and system scripting, and is popular for Rapid Application Development and as a scripting or glue language to tie existing components because of its high-level, built-in data structures, dynamic typing, and dynamic binding. As you can see above, it's easy to experiment with variables and operators. Also, the interpreter throws, or "raises" in Python parlance, a runtime error if the code tries to read a variable that has not been assigned a value. Like C++ and Java, Python is case sensitive so "a" and "A" are different variables. The end of a line marks the end of a statement, so unlike C++ and Java, Python does not require a semicolon at the end of each statement. Comments begin with a '#' and extend to the end of the line.

Department of MCA  
Seminar on Research opportunities on ERP Software

## Summary Report

**DATE** : 15/02/2023  
**VENUE** : B1 208 Seminar  
**NO. OF PARTICIPANTS** : 50

This is to inform that, Excel Engineering College, Department of MCA conducting **Seminar on Research opportunities on ERP Software** on 15.02.2023. ERP is a category of business software that automates business processes and provides insights and internal controls, drawing on a central database that collects inputs from departments including accounting, manufacturing, supply chain management, sales, marketing and human resources (HR).

Every business has multiple stakeholders collaborating to make things work. However, it becomes challenging when critical information is scattered across disconnected systems. For example, the accounting and FP&A teams could each have different spreadsheets with different figures for expense tracking.

ERP systems centralize data, provide cross-departmental visibility, enable efficient analysis, resolve data conflicts, and drive process improvements. That translates to cost savings and better productivity as people spend less time digging for needed data.
