Teachers must be friendly with us to communicate easily

-

Expecting teacher to teach with real time example

Teachers should be thorough with derivation in subject because because most of the teacher don't know the concept they just omit what is in question bank

Teacher should teach the concept within the time limit because most of the teacher rush up at last end semester time to complete syllabus

1. Embrace Technology: Incorporating technology into the teaching-learning process can greatly enhance engagement and interactivity. Utilize educational tools, online resources, multimedia content, and learning management systems to make lessons more interactive and accessible. Additionally, consider implementing virtual classrooms, video conferencing, and online collaboration platforms to facilitate communication and collaboration among students and teachers.

2. Personalize Learning: Recognize that students have diverse learning styles, preferences, and needs. Implement student-centered approaches that allow for personalized learning experiences. Offer a variety of instructional methods, such as lectures, discussions, group activities, and project-based learning, to cater to different learning styles. Provide opportunities for individualized support, feedback, and self-assessment to help students track their progress and focus on their specific areas of improvement.

3. Foster Active Learning and Critical Thinking: Encourage active participation and critical thinking skills among students. Move away from traditional passive learning methods and promote active learning strategies that involve problem-solving, discussions, debates, and hands-on activities. Encourage students to ask questions, analyze information, and think critically. Provide opportunities for collaborative learning, where students can work together, share ideas, and learn from each other's perspectives.

Remember that these suggestions are general and may need to be tailored to fit the specific context and requirements of your institution. It is essential to regularly assess and evaluate the effectiveness of implemented strategies and make adjustments as needed based on feedback from students, teachers, and other stakeholders.
